

Recycled Type 1

Part of The Leiths Green Technology Range

**A Sustainable Solution That
Lowers Carbon Emissions
Without Sacrificing Quality**

What Is Recycled Type 1

Recycled Type 1 Aggregate is a sustainable 40mm minus material produced from construction and demolition waste, consisting primarily of concrete and brick. This diverts what would ordinarily go to landfill and supports the circular economy, whilst still producing a product that meets exacting standards.

What Is It Used For

- Sub-base for roads, car parks, footpaths, and driveways.
- General fill material to raise ground levels.
- Backfill for trenches and excavations.
- Structural base for buildings.
- Hardstandings, paths, patios, and more.

What Are The Benefits

Sustainability

You are diverting waste from landfill and supporting the circular economy.

Performance

Locks together tightly when compacted, ensuring a solid and dependable base.

Multi-Use

Delivers the quality you need across a wide range of applications.

Technical

Meets stringent technical specifications.

Recycled Type 1

What Are The Specifications

Material Description	0/31,5mm Type 1 SHW 803
Maximum Fines	f_{10}
Los Angeles (LA)	LA_{20}
Frost Heave	11mm, non-frost susceptible

Sieve Size (mm)	Limits	Typical
63	100	100
31.5	75-99	97
16	43-81	68
8	23-66	44
4	12-53	31
2	6-42	23
1	3-32	18
0.063	0-9	4
R4/P8	7-30	13
R8/P16	7-30	24
